## New software release for Instruments and GPS displays

We are pleased to announce a software upgrade for the Simrad Professional I3005, I3007 instruments and P2005 and P3007 GPS displays.

The upgrade fixes reported issues and bugs found during internal testing.

## Major changes:

- NMEA 0183 input has been corrected to allow 10 Hz input at 4800 bauds.
- Some talker ID's and mode indicators in different NMEA 0183 sentences are corrected.
- Fixes issue with status icon on the P3005 and P3007 not updating when toggling between day and night mode.
- Makes it possible to show SOG and barometric pressure as digital gauges.
- Implements selection of altitude datum, WGS-84 or Geoid.

## Software upgrade:

- We recommend upgrading the software during installation or onboard service.
- Units in stock at factory or LC's will not be upgraded.
- Software upgrade is done via a microSD card. The software will be installed automatically by repowering the unit or by selecting the "upd" file from the FILES menu and start upgrade.

The new software can be downloaded <http://downloads.navico-commercial.com/>.
